## Catch what might otherwise go unnoticed.

Ektachrome Elite 100 film is Kodak's sharpest Ektachrome ever, with the finest grain of any 100-speed slide film. It delivers outstanding color accuracy, and details so sharp, nothing will go unnoticed. Not even a chameleon.

(Doug Wechsler/VIREO)

The 1995 ZooGoer calendar captures a colorful sampling of the world's 9,600 bird species. Throughout our history, humans have been captivated by bird flight, color, and song. That should come as no surprise because birds are among the most visible and interesting animals we see on a daily basis. They live and breed on all continents and in all habitats, from Antarctic ice floes to equatorial rainforest, high deserts to tidal marshes. The range in birds' sizes, color, and habits boggles the mind. For example, the smallest species, the 2-1/4-inch Cuban bee hummingbird, would look like a bee if it hovered near the world's largest, the 250-pound, eight-foot-tall ostrich of the African plains.

(B. Randall/VIREO)

All birds share one obvious characteristic. Not all species can fly, and not all sing—but all have feathers of some sort, from the elegant long plumes that grace Asia's peacocks to the hair-like quills coating kiwis.

The greatest diversity of bird species occurs in tropical countries, such as Colombia and Indonesia, but you may be surprised at just how many birds you can find in the wilds around your home. More than 350 species can be seen within a few hours' drive of Washington, D.C., for instance, and on a typical winter day, a backyard birdfeeder can attract 15 to 25 species. This year's calendar includes local as well as exotic, large as well as small, and strange as well as familiar birds.

(Brenda Clymire/NZP)

Over the millennia, each bird species has evolved specific breeding and feeding requirements. Within their habitats, birds serve as important environmental indicators, and their disappearance from an area is a warning sign to us that natural balances may be tipping. Today, about 70 percent of bird species are estimated to be in decline, due mainly to such human activities as habitat destruction, overhunting, introduction of exotic animals, and pollution.

FONZ's 1995 National ZooFari will also focus on birds, and will be a chance to celebrate their beauty while creating a broader awareness of how we can better understand and save these incredibly diverse creatures.
